

# Making the most of on-farm data

**LOCATION** South East - rotating around participating properties

**WHEN** July 2018 – June 2019

Thinking of getting into eID but not sure where to start?

Do you have lots of individual animal data but are not sure how to collate it to make meaningful decisions?

Do you want to know which commercial animals on farm are producing the most?

What % of fetuses are surviving – and how could you do better?

**Then please join Next Generation Livestock Solutions in a program designed to coach you, your staff and contractors through implementing eID on-farm.**

## Program Overview

The program consists of 6 x half-day group coaching sessions looking at:

- setting and monitoring your livestock breeding objective
- data collection techniques for every stage of the breeding and finishing cycle
- how to collate data to make meaningful breeding decisions

## Cost:

The commercial cost of this program is \$2100 (+GST) per business, for up to 2 participants per business.

*With support from MLA's Profitable Grazing Systems this program is offered at \$1500 (+GST) per business, for up to 2 participants per business.*

**Places in the South East program are limited to 10 properties on a first-in, first-served basis.**
